Dear Google Hiring Team:

I am writing to express interest in applying for the position of Software Engineering Intern for Summer 2017. I'm currently in my third year at Miami University where I'm majoring in Software Engineering with a minor in Humanitarian Engineering and Computing. I strongly admire the creativity and innovation that Google instills in their products. For example, I admire the user experience of using Google Drive. I enjoy and have experience in developing with users in mind.

This past summer and part-time currently, I'm working as a Web Communications Intern at Miami University. In this job I manage the College of Engineering and Computing's website where I keep information up-to-date and design new layouts to keep viewers interested. My work with the website helped fuel my passion for creating software with the user in mind. So much so that I'm currently enrolled in a course about UI/UX design, where I'm learning the process for creating a stunning UI. I'm curious about creating better ways for people interface with technology. Because of my passion for users and technology, I recently added a minor in Humanitarian Engineering and Computing, where I am aiding the Peace and Justice Studies Association with UI and accessibility issues on their website.

Apart from my front-end experience, I've spent a lot of time programming in Java. I learned the fundamentals of programming, object-oriented programming, and data structures in Java. I also completed a semester long project using Swing where I was my team's leader. I designed, documented, and presented a piece of software to detect overlaps in exam times for Miami University students.

I think my skills align well with what you're looking for in an intern and I would love to be considered for the position. Please email me at [belangej@miamioh.edu](mailto:belangej@miamioh.edu) to set up an interview. I look forward to learning more about Google. Thank you for your time and consideration.

Sincerely,

Emma Belanger
